+91 9987312001 Portfolio aryan.dev.careers@gmail.com GitHub Mumbai, India

EDUCATION

Vivekanand Education Society's Institute of Technology

Bachelor of Engineering in Artificial Intelligence and Data Science

2022 – 2026

Mumbai, India

TECHNICAL SKILLS

Languages: Go, Java, Python, JavaScript, SQL, Dart

Frameworks: Spring Boot, FastAPI, Next.js, Express.js, Flutter, Celery

Databases: PostgreSQL, MongoDB, Redis, Supabase

Systems / DevOps: Linux, Docker, Kubernetes, AWS, Azure, GCP, CI/CD, GitHub Actions, Grafana

Core CS: Data Structures & Algorithms, OOP, Concurrency, Networking, Distributed Systems

EXPERIENCE

Thyne Jewels | E-commerce Platform

Nov 2025 – Aug 2026

Full Stack Developer, Valnee Solutions

Flutter, Go, AWS

- Built a **Flutter** mobile app and a scalable **Go** API, plus a product data ingestion pipeline that makes adding new products seamless.
- Integrated the 3D **ijewel** library allowing users to view a 3D rendered customizable piece of jewellery.
- Restructured the Go backend and rightsized cloud infrastructure, **cutting client cloud costs by 30%**.
- Handled deployment across AWS, the Play Store, and the App Store, automating builds with **Codemagic**.

Signalmint | Ad Intelligence Platform

Nov 2025 – Aug 2026

Full Stack Developer, Valnee Solutions

Python, Redis, Celery

- Architected a pipeline that scrapes the Meta Ad Library and ranks and compares competitor campaigns.
- Built asynchronous workflows with **Redis** queues and **Celery** workers for ad extraction and analysis, processing 100+ brands a day.
- Maintained deployed worker containers on **Azure**.

Reach Saga | AI Content & SEO Platform

Nov 2025 – Aug 2026

Full Stack Developer, Valnee Solutions

Python, AI video pipelines

- Built an automated pipeline that turns articles into SEO-optimized short-form video.
- Designed data pipelines that analyze keyword trends to drive an SEO-first content strategy.
- Deployed the platform across **GCP Cloud Run** and **Vercel**.

PROJECTS

Personalized LLM Fine-Tuning Pipeline | Python, Llama 3.1 8B, Unsloth, QLoRA, Modal

- Processed 100,000+ chat messages into 12-turn dialogue windows with speaker boundary markers.
- Fine-tuned **Llama 8B** and **Qwen 14B** on A100s, iterating on hyperparameters and response intent.
- Deployed a lightweight **Go** API that runs inference on serverless GPUs, with a **React.js** frontend.

Loan Approval Microservices Platform | Go, Amazon EKS, RabbitMQ, AWS VPC, RDS PostgreSQL

2026

- Designed an event-driven **Go** system with IAM, Loan, and Notification services on **Amazon EKS**, decoupled via **RabbitMQ**.
- Implemented stateless auth with **RSA-signed JWTs** verified locally by each service, avoiding a database lookup per request.
- Isolated app pods and **RDS PostgreSQL** in private subnets behind an **ALB/NAT Gateway** in a custom **AWS VPC**.
- Load-tested with k6 and Vegeta on a 24-node attacker/defender EKS setup: **1M+ requests/sec** (simple JSON response, intra-VPC).

Distributed Blockchain & P2P Node | Java 17, secp256k1 ECC, TCP Sockets, WebRTC

June 2026

- Implemented **secp256k1** point arithmetic and **ECDSA** from scratch, with no high-level crypto libraries.
- Built a raw-TCP **P2P network** with proof-of-work mining, dynamic difficulty, and longest-chain consensus.
- Extended it with **WebRTC** clients that mine in the browser, using a Go server as a matchmaker.
